

Fit Kids Day caught on as an event, and is now a nonprofit organization. The Presidential Fitness Counsel has since talked to Sofia Victoria about using the Fit Kids Day model for their organization. The event was created by kids, for kids, and offers many leadership opportunities. In addition, the program has helped introduce fitness ideas and plans to less fortunate communities.

Mr. Speaker, I am honored to congratulate Sofia Victoria de la Pena on her accomplishment, and I ask my colleagues to join me in recognizing her outstanding achievement. It is an honor to know a family that continues to work hard to improve their community every day.

**HONORING DAVIESS COUNTY, KY,  
ON CELEBRATING ITS BICENTEN-  
NIAL**

**HON. BRETT GUTHRIE**

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Thursday, May 21, 2015*

Mr. GUTHRIE. Mr. Speaker, I rise today to congratulate Daviess County, Kentucky, on celebrating its bicentennial.

Daviess County came into its existence on June 1, 1815, through an Act of the Kentucky General Assembly. But on May 30, 2015, Daviess County will begin to celebrate its 200th birthday.

Daviess County lies in the Western Kentucky Coalfield region and is also an oil producer. Bounded by the Ohio River, it serves as an important trade and transportation artery—making it a major manufacturing center, transportation hub and U.S. Customs Port of Entry on the Ohio River. It is also a leader in health care, medical research and pharmaceutical experimentation.

The keystone celebration, on May 30th, includes an early morning 5 k run/walk at the Mount Saint Joseph Motherhouse of the Ursuline Sisters. Activities for people of all ages will take place around the Courthouse Square, and the day will end with a reception and the opening of a special Bicentennial Art Exhibit at the Owensboro Museum of Fine Art.

Other activities will include honoring African Americans from Daviess County who served in the Union Army during the Civil War with the dedication of an historic highway marker on the Courthouse lawn. There will also be a series of Bicentennial-related programs at the Daviess County Public Library throughout the summer.

A new history of Daviess County, Kentucky, *Celebrating Our Heritage*, has been published and highlights many aspects of daily life in the county. Among these topics is Daviess County's rich history in the agriculture industry—citing corn, soybean and tobacco producers.

Daviess County is the home to some of Kentucky's great colleges and universities, including: Brescia University, Kentucky Wesleyan College, a campus of the Kentucky Community and Technical College System and a branch of Western Kentucky University.

It is important to also highlight the leadership in Daviess County and all their efforts to make this a successful and thriving community. Thank you for making Daviess County what it is today.

I encourage everyone in Kentucky's Second District to join in the festivities to celebrate the

rich history and traditions of Daviess County. I congratulate all who live and serve the county and look forward to taking part in some of these celebrations myself. Here's to many more years of success.

**ADVANCING RESEARCH FOR  
HYDROCEPHALUS PATIENTS**

**HON. CHRISTOPHER H. SMITH**

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Thursday, May 21, 2015*

Mr. SMITH of New Jersey. Mr. Speaker, I rise today to call attention to legislation I introduced last week, the Advancing Research for Hydrocephalus Act, and urge my colleagues to cosponsor this important bill. My new legislation—which is supported by the national Hydrocephalus Association—will facilitate better research into this devastating condition by requiring the collection of demographic information on the hydrocephalus community.

Hydrocephalus, which is defined as an abnormal accumulation of cerebrospinal fluid (CSF) within cavities in the brain, can cause brain damage, vision issues, and extreme pain for those affected.

One of those affected, Adrienne D'Oria, a 22 year old from my Congressional District, has suffered from hydrocephalus since she was 10 months old. In addition to the excruciating pain, complications from shunt malfunctions, dozens of brain surgeries and hundreds of hospital visits have essentially eliminated any chance of a normal childhood. Hydrocephalus continues to limit her options for the future:

All of my friends, everyone I went to school with is graduating and starting the next stage in their life. I can't do that," she said recently. "I had to withdraw from so many classes because of hospital admissions and all the surgeries. Even though I've been out of high school for four years I only have the credits of a freshman. My friends are graduating and I'm stuck in limbo. I can't control it.

Unfortunately for Adrienne and thousands like her, the most common treatment for hydrocephalus remains a surgically-inserted shunt. Shunts drain the fluid from the brain through the neck and into other parts of the body. They frequently become blocked, malfunction, or cause infection. In almost half of all cases in children, the shunt fails within the first two years. When they do, patients must immediately locate a medical facility and a neurosurgeon who can correct the problem. This precarious situation is a constant source of fear for those who suffer from hydrocephalus and their families. In fact, hydrocephalus is the most common reason for brain surgery in children.

The scientific and medical communities not only have very few resources that can help them in understanding this condition, they are not even aware of the true impact of this disorder. Without better data and research, they cannot develop more effective treatments.

Mr. Speaker, there are some estimates that this condition affects roughly one million Americans. Yet given that hydrocephalus can occur either congenitally or be acquired, oftentimes through infection or traumatic brain injury, reporting of hydrocephalus has been inconsistent. Currently no mechanism exists to

identify and track persons with hydrocephalus who develop the condition after birth. As a result, we do not have a good grasp on the demographics of hydrocephalus patients.

My bill provides a remedy. The Advancing Research for Hydrocephalus Act will establish a National Hydrocephalus Surveillance System (NHSS) to collect information on the incidence and prevalence of hydrocephalus among a range of demographics, including changes in epidemiology over time. This surveillance system would provide a wealth of data for researchers. Better surveillance will facilitate better research and lead to better outcomes, treatment and care for the infants, children, and adults experiencing the agonizing pain of hydrocephalus.

So I urge my colleagues to support my legislation to help provide assistance and raise the quality of life for individuals, like Adrienne, who are suffering from this condition.

**IN RECOGNITION OF EAST HAR-  
LEM COUNCIL FOR HUMAN SER-  
VICES, CELEBRATING 50 YEARS OF  
SERVICE**

**HON. CHARLES B. RANGEL**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, May 21, 2015*

Mr. RANGEL. Mr. Speaker I rise today to give recognition to the East Harlem Council for Human Services, which is celebrating 50 years of serving the local community. The work done by the Council has been vital to our community and has changed the lives of so many for decades. Groups like the Council and institutions like the Boriken Care Center are worth fighting for, and I will continue to make sure there are adequate resources available for them to continue to thrive and serve their community.

I am proud to honor the East Harlem Council for Human Services which was incorporated in 1965 though grass-roots efforts of local East Harlem residents committed to addressing unmet needs in their community. The Council is a multi-service not-for-profit which coordinates an array of affordable and no cost services to more than 10,000 individuals each year without regard for an individual's ability to pay for services. The Board of Directors and more than almost 200 staff members are united in a commitment to the Council's mission of providing the highest quality of comprehensive, community-based, fully bilingual services to the East Harlem community.

The Council is the largest grass-roots, multi-service not-for-profit in our East Harlem community. By continuing its strong history of diverse community-based leadership, and commitment to the self-determination of this institution and the East Harlem community at large, the Council has positioned itself for continued growth. The Council continuously renews its commitment to the residents of El Barrio to ensure that the Boriken Neighborhood Health Center and its sister programs will continue to provide affordable quality comprehensive services in East Harlem for many more decades.

There's no finer work than fighting to bring health and essential wellness to those struggling to make ends meet in underserved communities. Everyone deserves access to quality
