

clear indication of the new majority's inability to even address the most basic environmental concerns.

This legislation recognizes the ongoing work that State and private folks have done to protect Yellowstone geothermal features while still providing clear direction and a legal framework to build on these various efforts. This legislation is the result of legislative efforts begun in the 1988 amendments to the Geothermal Steam Lease Act. That legislation established a list of geothermal resources that should not be allowed to be developed under this Nation's steam leasing laws. Yellowstone was the most threatened of these cultural sites and it was chosen as a test case for protection.

Since that time State and Federal officials have worked toward a cooperative way of protecting Yellowstone thermal wonders. All concerned agree that although gains have been made this legislation presented today is keenly necessary to complete our pledge to provide rock-ribbed, ironclad, copper-riveted protection for Yellowstone's geysers, and hot pots.

The legislation also provides a pattern for the protection of other geothermal treasures such as Crater Lake in Oregon. This legislation is a bipartisan proposal that has complete support from the State governments adjacent to the park and it shares environmental support with no known development concern.

The land exchange that is attached to the bill removes the only permit, given in any State, for drilling hot water adjacent to Yellowstone. The exchange provides solutions to access problems while granting to the Government hundreds of claims to hot water in the Corwin Springs KGRA. Public access in general is improved to federal land and the Church Universal and Triumphant is provided a welcome solution to their longstanding inholding problems.

This exchange solves a problem created by the time it has taken to address this issue and is luckily the only problem that currently exists. Failure to act will only make a final solution more difficult. Wrongheaded ideology is all that stands in the way of true statutory protection for Yellowstone and Old Faithful.

I hope we will move quickly to save the last intact geyser basin in the world. It is our duty to do so.

#### A TRIBUTE TO THE NEEDLES MUSTANGS

### HON. JERRY LEWIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, January 27, 1995*

Mr. LEWIS of California. Mr. Speaker, I am proud to bring to your attention today a remarkable group of individuals who recently made the citizens of Needles, CA particularly proud. I am speaking of the Needles High School varsity football team—the Mustangs—who will be remembered not for their record but for the fact that they played like champions all season. To me, and many others, they are winners in every sense of the word.

The Mustangs, who started the season with only 18 players, worked extremely hard to represent their school but suffered a number of heartbreaking injuries during the season. In fact, in one game, 9 members of the team played every single play of the game on of-

fense and defense because injuries left the team with only 13 players dressed to play. For most of the season, the squad was outmanned, undersized, and overwhelmed by larger schools. But the Mustangs never quit. They fought hard and, more importantly, played with heart, winning the respect of their families, opposing coaches, and the entire community.

It would have been easy for these kids to give up going into their last game of the season winless. But they didn't. Because they would not ever quit, the Mustangs fought for every yard and persevered in the face of adversity, winning a hard fought contest, 25 to 18. When the final gun had sounded, one would have thought they had won the Super Bowl. I guess in many respects they did. Most inspiring was the fact that these young men, all from different ethnic and cultural backgrounds, demonstrated what it means to work together, to continue to work hard, and to never give up. Their committee, courage, and determination provides an example for us all to admire, and emulate. They are our greatest hope for the future of Needles and the future of our country. To me, and the many people who make Needles their home, it was truly a championship year.

Mr. Speaker, I ask that you join me, our colleagues, and the many friends of the Needles Mustangs in recognizing their commitment to winning on and off the field. They have taught all of us many things and are certainly worthy of recognition by the House today.

#### AN AGREEMENT WORTH PRESERVING

### HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, January 27, 1995*

Mr. HAMILTON. Mr. Speaker, as you know, North Korea's efforts to acquire a nuclear weapons arsenal constitute one of the most serious national security threats facing the United States today.

Last October, Ambassador-at-Large Robert I. Gallucci negotiated an agreement with North Korea that holds out the promise of freezing and eventually eliminating North Korea's nuclear weapons program. The Congress may face no more pressing national security issue in all of 1995 than whether to permit the implementation of this accord.

Unfortunately, there exists considerable confusion about this agreement, and the press has contained a number of erroneous statements as to what this agreement does and does not permit.

Six months ago, we were on the verge of a confrontation with North Korea—a confrontation no one wanted, and which held little possibility of addressing our concerns about North Korea's nuclear program. Today, however, as a result of the Geneva agreement, Pyongyang has frozen its nuclear program and agreed to a step-by-step process that will eventually eliminate that program.

North Korea in already taken a number of significant steps under the accord, in advance in any United States concessions. The North has already shut down its only operating reactor. It has already halted construction on two new reactors. It has already sealed its repro-

cessing facility and stopped construction on a new reprocessing line. It has already refrained from reprocessing its spent fuel rods, which would have given the North enough plutonium for four or five nuclear weapons. And it has already admitted IAEA inspectors and U.S. technicians into its nuclear facilities.

By accepting the record, Pyongyang has agreed not only to resume IAEA inspections of its nuclear facilities, but to go beyond its obligations under the Nuclear Nonproliferation Treaty [NPT]. It has agreed, for instance, to forego reprocessing the spent fuel it presently possesses, and to shut down its reprocessing facility—even though the NPT permits reprocessing. And without reprocessing, the North will not be able to obtain the plutonium required for the manufacture of nuclear weapons.

Mr. Speaker, this agreement is not based on trust. It is not based on promises. It is based solely on North Korea's performance. The United States retains its ability, both through IAEA inspections and through its own national means, to verify if the North is abiding by its commitments. And if, at any time, we conclude that Pyongyang is not living up to its end of the bargain, we can back out of the deal.

The alternative to this agreement is not a better agreement. The only real alternatives are to return to the United Nations to ask for economic sanctions that no one believes will succeed, or an escalation to war.

But with this agreement, we have an accord that diminishes tensions on the Korean peninsula. An accord that protects our security interests and those of our allies. An accord that advances our global nonproliferation objectives. An accord that obligates other to pick up the overwhelming bulk of the financial costs.

Mr. Speaker, this is what I call a good bargain. I urge my colleagues on both sides of the aisle to inform themselves about this agreement and to support its implementation.

#### CONTROLLING THE DEFICIT

### HON. THOMAS M. FOGLIETTA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, January 27, 1995*

Mr. FOGLIETTA. Mr. Speaker, I share with my colleagues a grave concern for gaining control of the deficit because it stifles our national economic growth. I question the way to get there. Let me explain.

During the debate on a balanced budget, we watched Members vote for a balanced budget amendment that would protect Social Security. Others voted for a version of the amendment that would strip supermajority provisions for increasing debt limit and raising taxes, but would require a balanced budget in 7 years. Still others have urged the proponents of these measures to identify the specific cuts needed to balance the budget, but would still favor a balanced budget in 7 years, notwithstanding how cruel the answers to the plea for a balanced budget plan would be.

Allow me to state my position clearly. I do not support an arbitrary balanced budget amendment, by a certain year, to the U.S. Constitution which provides no flexibility to meet other vital national goals. I do favor a
