

Germany has even doubled its funding for home care services in the past 5 years, but that, unfortunately, does not match the reality of what is required.

The German Ministry of Finance itself has admitted that the level of care financed by its government has been vastly insufficient to date, especially for those who are in dire need of intensive, long-term care.

The real issue of concern, one that is exacerbating the severe lack of funding and one where I think we can press the German Government and work with it to find a fair solution, is the inconsistent manner in which existing funding and care is being disbursed.

The current system places an undue burden on the Holocaust survivors and their families, forcing them to jump through bureaucratic red tape, causing harmful delays and waste.

This resolution is a simple one. It is straightforward. It is noncontroversial. I urge my colleagues to support it.

Congress is in a unique position to work for and fight on behalf of Holocaust survivors, many of whom are our constituents. We have a long history of working on behalf of Holocaust survivors and seeking out their long-overdue justice.

Next Wednesday, May 4, is Yom HaShoah, Holocaust Remembrance Day. As we remember and honor the victims and survivors of the Holocaust, we are all compelled to do everything in our power to help those who have lived through those unconscionable atrocities.

These survivors, Mr. Speaker, have seen the worst that humanity has to offer. Let us show them now the best of humanity by ensuring that they can, indeed, live out their days in dignity.

#### FLOOD INSURANCE MARKET PARITY AND MODERNIZATION ACT

The SPEAKER pro tempore. The Chair recognizes the gentleman from Pennsylvania (Mr. ROTHFUS) for 5 minutes.

Mr. ROTHFUS. Mr. Speaker, I rise today in support of H.R. 2901, the Flood Insurance Market Parity and Modernization Act. I am a proud cosponsor of this bipartisan bill, which represents a positive step towards much-needed flood insurance reform.

This legislation provides clarity to States and private insurers and, in doing so, clears the way for competitive firms to play a much greater role in the flood insurance market.

For my constituents back home, the 705,000 western Pennsylvanians who sent me to Washington to look out for their interests, this means more choices, more competitive rates, and more innovation. Passing this legislation would be a win for western Pennsylvanians eager for change.

Although some tend to think of flood insurance as a concern for coastal States like Florida, Louisiana, and Texas, many Pennsylvanians are close-

ly monitoring the ongoing debate about the future of flood insurance.

Many of my constituents live alongside rivers and streams and in valleys with a history of flooding. My district is also home to many older cities and towns like Johnstown that are filled with properties that predate the National Flood Insurance Program. People have lived in these places for generations and have a deep sense of community.

Rightly, my constituents who live in these flood-prone areas worry about the future availability of affordable flood insurance options in the marketplace. They want to remain in their homes, in the places where multiple generations of their families have lived and worked and built lasting connections with their neighbors.

My constituents need access to affordable flood insurance. As this debate continues over the next year, I will make sure that their concerns are addressed.

H.R. 2901 is a strong step in the right direction as we seek to reform Federal flood insurance policy.

I hope that H.R. 2901 will receive the same broad, bipartisan support it received in the Financial Services Committee when it comes up for a vote later today.

I look forward to working with my colleagues at the committee and on both sides of the aisle as work continues on flood insurance reform.

#### HONORING THE LIFE OF NORMAN F. KYLE

Mr. ROTHFUS. Mr. Speaker, I rise today to honor and thank Norman Kyle, an Aliquippa native who passed away at the age of 95 this past Sunday, for his brave service to our Nation.

Norman served as a U.S. Army infantryman during World War II and, after being captured by the Nazis, was a POW for over 700 days.

He was born on August 24, 1920, in Aliquippa and was retired from J&L Steel Corp., where he worked for more than 40 years. Norman was a John Wayne fan, and he collected more than 100 trains.

In addition to his parents, Norman and Sadie Kyle, he was preceded in death by his wife, Ruth Kyle, two sons, Robert and Kenneth Kyle, and a grandson, John Scheeler, Jr.

Norman is survived by his 3 daughters, 9 grandchildren, 16 great-grandchildren, and 5 great-great-grandchildren.

It was men like Norman Kyle who made their generation great and who were a big part of making this country the leader of the world. His life, legacy, and service will not be forgotten.

#### “I AM JAZZ”

The SPEAKER pro tempore. The Chair recognizes the gentlewoman from California (Ms. SPEIER) for 5 minutes.

Ms. SPEIER. Mr. Speaker, all across the country today, teachers, librarians, and parents will be reading the book “I Am Jazz,” a children’s book about

transgender youth, co-written by Jazz Jennings, pictured here, and Jessica Herthel.

Last year, legal threats from the anti-LGBTQ hate group forced a school in Wisconsin to cancel plans to read this book to support a transgender student. The local community rallied, holding a reading at the library that drew more than 600 attendees in support of the student.

Now this is a movement, with readings across the country to increase understanding and to show young people that they are welcomed and loved.

I am proud to join these readers today from the House floor. Now I am going to read this book, “I Am Jazz.”

I am Jazz. For as long as I can remember, my favorite color has been pink. My second favorite color is silver, and my third favorite color is green.

Here are some of my other favorite things: dancing, singing, back flips, drawing, soccer, swimming, makeup, and pretending I’m a pop star.

Most of all, I love mermaids. Sometimes I even wear a mermaid tail into the pool.

My best friends are Samantha and Casey. We always have fun together. We like high heels and princess gowns or cartwheels and trampolines.

But I am not exactly like Samantha and Casey. I have a girl’s brain, but a boy body. This is called transgender. I was born this way.

When I was very little and my mom would say, “You’re such a good boy,” I would say, “No, mama. Good girl.”

□ 1015

At first, my family was confused. They always thought of me as a boy. As I got a little older, I hardly ever played with trucks or tools or superheroes, only princesses and mermaid costumes. My brothers told me that that was girl stuff. I kept right on playing.

My sister says I was always talking to her about my girl thoughts and my girl dreams and how one day I would be a beautiful lady. She would giggle and say, “You are a funny kid.”

Sometimes my parents let me wear my sister’s dresses around the house, but whenever we went out, I had to put on my boy clothes again. That made me mad. Still, I never gave up trying to convince them. Pretending I was a boy felt like telling a lie.

Then one amazing day, everything changed. Mom and dad took me to meet a new doctor who asked me lots and lots of questions. Afterwards, the doctor spoke to my parents, and I heard the word “transgender” for the very first time. That night at bedtime, my parents both hugged me and said, “We understand now. Be who you are. We love you no matter what.”

That made me smile and smile and smile. Mom and dad told me I could start wearing girl clothes to school and growing my hair long. They even let me change my name to Jazz. Being Jazz felt much more like being me. Mom said that being Jazz would make me different from the other kids in school, but that being different is okay. “What is important,” she said, “is that I am happy with who I am.”

Being Jazz caused some other people to be confused, too, like the teachers at school. At the beginning of school, they wanted me to use the boys’ bathroom and play in the boys’ gym class, but that didn’t make me feel normal at all.

I was so happy when the teachers changed their minds. I can’t imagine not playing on

the same team with Casey and Samantha. Even today there are kids who tease me or call me by a boy's name or ignore me altogether. This makes me feel crummy. Then I remember that the kids who get to know me usually want to be my friend. They say that I am one of the nicest girls in school.

I don't mind being different. Different is special. I think what matters most is what a person is like inside. And inside, I am happy. I am having fun. I am proud. I am Jazz.

#### PENN STATE'S CONTRIBUTION TO CYBER AND DIGITAL MANUFACTURING

The SPEAKER pro tempore. The Chair recognizes the gentleman from Pennsylvania (Mr. THOMPSON) for 5 minutes.

Mr. THOMPSON of Pennsylvania. Mr. Speaker, I am very excited to be on the floor this morning to talk about digital manufacturing and how that impacts the things that we make. This is a quantum leap in manufacturing: allowing objects to be rapidly printed and, in the case of cyber manufacturing, printed remotely.

Since 2009, I have proudly represented Pennsylvania's Fifth Congressional District, which is the largest geographically in the Commonwealth. It is also the home to Penn State University's main campus in State College, Pennsylvania, as well as to the Behrend campus in Erie County, and the DuBois campus in Clearfield County.

Over my time in Congress, I have had the opportunity to see firsthand how the university is leading in the field of digital manufacturing in areas that range from 3D bioprinting to cyber manufacturing—robotics and automation.

Portions of the Fifth Congressional District have a long history in the powdered metal industry. In fact, St. Mary's in Elk County, as well as in Cameron County, an adjoining county, have been known for years as the powdered metal capital of the world. A few months ago, I visited Penn State to take a look at their work in the field of additive metal manufacturing, which takes place in the university's applied research laboratory CIMP-3D lab. It was amazing to watch metal parts be created using what amounts to a 3D printer, and it is easy to see how this new technology will revolutionize careers in the powdered metal industry, which has meant so much to our region.

In the same vein, I have been so impressed with the university's efforts in hosting an additive manufacturing challenge for small businesses. The challenge will award five companies \$40,000 to work with faculty and staff at Penn State CIMP-3D on projects to demonstrate this amazing technology.

Mr. Speaker, beyond the dividends that these new innovations are paying for the industries which drive America's economy, this research is also benefiting our national defense. Penn State is currently working with the

United States Naval Air Systems Command to 3D-print, -qualify, and -certify a critical safety item—in other words, an important part of a Department of Defense vehicle—in titanium. This part will be flown in an aircraft next month and will be the first 3D-printed part to have gone through the entire process to become flight certified and tested in the military.

Now, I commend the pioneers of this exciting new technology from universities such as my alma mater, Penn State, but also universities such as Georgia Tech and Virginia Tech, along with companies such as the aircraft engine manufacturer, Pratt & Whitney, in helping students prepare for what are certainly the careers of the future.

Mr. Speaker, as co-chairman of the Congressional Career and Technical Education Caucus, I spend a lot of time visiting schools, visiting our high schools, secondary schools, and post-secondary schools that are providing training to greater opportunity. It is exciting to go into specifically high schools and see where this digital manufacturing—this additive manufacturing using the 3D printers and various types of materials—is now present in our high schools.

I appreciate the partnership that Penn State has had working with not just business and industry, but the collaborative work with our high schools to begin to introduce and to grow this new innovation in manufacturing and to introduce this to young learners, many of whom, I believe, are going to go on and will find great family-sustaining jobs through that type of career and technical education training, being exposed to the very newest form of innovation for manufacturing.

Some of them will go on to work for businesses and industries. Who knows? Some of them will become entrepreneurs and return to a day of cottage industries. Some of our most amazing discoveries have happened in basements, garages, and spare bedrooms where entrepreneurs have developed and invented. With the use of digital manufacturing, a return to cottage industries is, quite frankly, something that I think is going to happen in an overwhelming way as often entrepreneurs take that innovation and are able to do some very specific product development and manufacturing targeting, maybe some specific niche markets.

So I am very excited in how technology relating to career and educational training and information technology, as it relates to digital manufacturing or additive manufacturing, is going to have a very positive impact on our citizens, our families, our businesses, and, quite frankly, the competitiveness of our Nation.

#### SOLUTION TO FLOODING IN HOUSTON, TEXAS

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas (Mr. AL GREEN) for 5 minutes.

Mr. AL GREEN of Texas. Mr. Speaker, there is a common refrain that you, I, and many others are quite familiar with. It is: but for the grace of God, there go I.

This refrain has significant meaning to all of us. I have used this refrain myself. I used it when it came to the East Coast and Sandy, the hurricane. I used it when it came to Flint and lead in the water. I have used it when we had the hurricane visit New Orleans—I am talking about Katrina. And I am using it as it relates to Puerto Rico. But for the grace of God, there go I.

But I will tell you, it takes on an even greater meaning when you become the subject of the refrain.

Mr. Speaker, I rise now because in Houston, Texas, over the last 2 years, we have had significant flooding. Over the last 2 years, in Houston, Texas, we had the Memorial Day flood. That flood created about \$3 billion worth of damage. This year, we have had the tax day flood, which created about \$5 billion. Combined, the two floods totaled \$8 billion in damages.

We have had lives lost in Houston, Texas: four lives estimated for the Memorial Day flood; eight lives for the tax day flood. Lives have been lost.

But for the grace of God, there go I. And I have a greater understanding of what it means because of the way this has impacted the people in my city and in my State.

Mr. Speaker, they are citizens of this country. I come to the floor today with a hue and cry, an appeal that we do something about these circumstances because this will not be the last flood that will take place in Houston, Texas.

There is a possible solution to some of the problems. I don't know that we could ever eliminate all of the flooding problems in Houston, Texas. But I do know that the Corps of Engineers has projects that are already on their docket, on their agenda; and if these projects are properly addressed, we can mitigate a good deal of this flooding.

These projects that the Corps has would cost us about \$311 million to complete. One such project is the Brays project. We authorized this in 1990, and we are projected to finish it in 2021.

Mr. Speaker, it didn't take that long to create the Erie Canal. It took us 4 years to complete the Golden Gate Bridge; the Hoover Dam was 5 years; the Erie Canal was 8 years. And it only took us about 8 years—maybe 10, by some estimates—to put a person on the Moon. Surely, we could have completed these projects sooner.

This bill, H.R. 5025, will accord us \$311 million to finish these projects so that we can save lives, so that we can save money; and the bill, if properly implemented with the creation of these projects and the completion of them, will also create jobs. More than 6,000 jobs are estimated to be created.

So I come before my colleagues today asking that you kindly sign on to H.R. 5025. It is an opportunity for us to do something to help somebody, to help
