

Coroners and medical examiners do not usually test for the drug unless they are asked to, and they are often unaware that an overdose has a fentanyl link when an individual tests positive for a different substance such as heroin.

Even more troubling, the men and the women who first respond to the scene of an overdose may not know how to identify fentanyl or how to handle the drug. This makes local and State first responders very vulnerable to the drug's harmful effects, because if the fentanyl powder is absorbed into the skin or accidentally inhaled, it can be deadly. In fact, a dose of just three salt-sized grains of fentanyl can be lethal.

So think about that. You are a first responder. You are going into a home or a business thinking that you are responding to an opioid overdose situation when, in fact, you might be exposing yourself to the fentanyl in the air or to something which gets on your skin. That is how deadly this new substance is that is creating this epidemic across our country.

Recently, DEA agents in Seattle raided a suspected fentanyl lab wearing HAZMAT suits and protective gear to make sure they did not inadvertently breathe in or touch the fentanyl. The DEA has told me that they sometimes cannot use dogs to sniff packages coming in from overseas suspected of containing fentanyl because these drug-detection dogs may die if they even inhale it.

The Drug Enforcement Administration is so concerned about this synthetic opioid that in March of 2015 it issued a nationwide alert highlighting fentanyl as a threat to health and public safety.

Fentanyl is a very real problem in my home State of Massachusetts. Lawrence, MA, which is about half an hour north of Boston, is a hotspot for fentanyl trafficking. From Lawrence, the drug ends up being processed and sold all over New England.

There are efforts already in place to address the spread of fentanyl. Mexico and China are its primary foreign sources and have been the focus of diplomatic efforts to curb fentanyl trafficking. We need to make sure that those countries are living up to their promises to combat the flow of this deadly drug and other synthetic opioids into the United States.

We know naloxone, sometimes called Narcan, is an effective antidote against an opioid overdose. But a single dose of naloxone is typically not enough to combat an overdose that includes fentanyl.

That is why earlier today I called on the Department of Health and Human Services and the Department of State to outline our domestic and international strategy against the trafficking of illicit fentanyl into America. As we await their responses, I know there are several critical steps that we must take in order to save lives.

We must educate the public about the existence of illicit fentanyl and the harm it can do.

We must educate first responders—our firefighters, our EMTs, our sheriffs, our health care workers—so that they can protect against injury to themselves as they are trying to identify a fentanyl overdose and so that they can protect themselves from the harmful effects of that drug.

Identifying a fentanyl overdose could mean the difference between administering multiple lifesaving doses of naloxone or death.

We should invest in programs that ensure that naloxone—Narcan—is readily available and accessible to those most likely to witness an overdose. We need to make sure that there are no shortages or unnecessary price increases for this lifesaving treatment.

We should issue guidance to States regarding the protocol for fentanyl testing in order to obtain a more accurate picture of fentanyl's deadly impact.

Illicit fentanyl is different from other opioids. It is difficult to detect and has deadly consequences for those who unknowingly come within its path. We cannot let another day pass without taking the necessary steps to educate our communities about fentanyl, to develop a national strategy, and to collaborate with our international partners—the Mexicans and the Chinese, especially—so that we can keep this illicit drug out of the cities and towns all over our country.

American lives depend on a solution to the latest opioid crisis. It is going to be something that people look back at and say: How can something have been worse than the heroin epidemic? How can something have caused more deaths than the heroin epidemic? That is where fentanyl is already in the State of Massachusetts. It is something that is going to come to each and every State in our country.

We have to take action now. We have to ensure that we protect our borders from it entering, but then we have to make sure that we give the proper training and protections and put them in place for every State and every city and town to be able to protect against this infecting our communities.

So I thank the Chair for giving me the opportunity to address the Chamber today.

I yield the floor.

I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. CASIDY). The clerk will call the roll.

The senior assistant legislative clerk proceeded to call the roll.

Mr. SASSE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

GUN VIOLENCE AND NATIONAL GUN VIOLENCE AWARENESS DAY

Mr. DURBIN. Mr. President, I wish to speak about the epidemic of gun vio-

lence that continues to plague our Nation.

Every year, around 32,000 Americans are killed by guns. According to recent Centers for Disease Control statistics, every day, on average, 297 Americans are shot, and 91 of those shootings are fatal. Communities across the Nation are affected by this violence, and no community has suffered more than the city of Chicago in my home State of Illinois.

From the start of the year through May 10, at least 1,242 people were shot in Chicago. During the same period, there were at least 215 murders in Chicago, the vast majority committed with guns. The level of violence in Chicago is significantly higher than in recent years. And more people have been shot in Chicago this year than in New York City and Los Angeles combined. It is devastating.

I met 2 weeks ago with the top Federal law enforcement officials in Chicago: U.S. Attorney Zach Fardon, U.S. Marshal Ed Gilmore, and leaders from the FBI, ATF, and DEA. They reaffirmed their commitment to do all they can at the Federal level to bring down this high level of gun violence in the city. They are committed to working with the Chicago Police Department and its new superintendent, Eddie Johnson, to ensure that Chicago's residents are both protected and respected by law enforcement.

There is much work that needs to be done to improve community policing in Chicago to better safeguard the public's safety. I am confident that the Justice Department's ongoing review of the CPD will lead to important reforms that will build trust between officers and the communities they serve. We have seen Justice Department reviews in other cities produce dramatic improvements. When communities and cops are working together with a relationship of trust and respect, it makes it harder for criminals to operate.

I also want to commend the many community leaders, faith leaders, teachers, volunteers, and family members who are working to provide Chicago's children with a better path, away from the violence. I met recently with students at John Hope College Prep in Englewood on the South Side of Chicago, along with City Year volunteers who worked with them. It was inspiring to hear how these high school freshmen and sophomores talked about their work with their City Year mentors. One student told me "the thing I love most about City Year is that they never let you give up." With the help of their mentors, these students are doing well in school, steering clear of the gangs, and planning for a bright future.

It is so important that we nurture these kinds of efforts throughout Chicago. We have to give the younger generation the opportunities and hope that will lead them away from the path of gangs and violence.

We also have a responsibility to help these efforts by stemming the flood of

illicit guns that comes into Chicago. When it is easy for gang members to get their hands on guns, it is hard for children and communities to avoid violence. We must all do our part to stop the gun trafficking that supplies Chicago's criminal gangs.

I want to commend President Obama for taking an important step last week to help combat gun trafficking. This step has to do with smart gun technology.

Right now we have security features on our phones and computers that can prevent thieves and unauthorized people from using them. You can secure these devices so they can only be unlocked with a password, fingerprint, or some other security feature. We can develop similar technology so that an unauthorized user cannot fire a gun. This would make it far harder for a prohibited gun buyer to get his hands on a gun he can use.

Smart gun technology would also prevent thieves from stealing guns to resell them, and it would help prevent kids from playing with guns and getting hurt.

For years there has been resistance to smart gun technology. Part of this resistance has come from the gun lobby, which always fights against proposals that might reduce gun sales. But resistance has also come from law enforcement, which had concerns about whether smart gun technology would work effectively.

Last week, the administration announced that it would partner with law enforcement to develop voluntary standards for what law enforcement would need in order to consider using smart gun technology. Within 6 months, this effort will produce baseline specifications for the reliability, durability and accuracy of this technology.

Once there is agreement on a set of standards for smart gun technology, then innovators can get to work on developing products that meet those standards and bringing those products to market. The administration will help this effort with its research dollars and purchasing power. They will help make this technology a reality.

This could be a game changer when it comes to deterring illegal gun trafficking. It is exactly the kind of effort that the city of Chicago needs. I commend the administration for undertaking this effort, and I will do everything in my power to support it.

As we work to prevent future gun violence, it is also important that we remember and pay tribute to those we have lost to this epidemic of violence.

June 2, 2016, will mark what should be the 19th birthday of Hadiya Pendleton. Hadiya was 15 years old when she was gunned down while standing in a park on Chicago's South Side on January 29, 2013. She had just performed with her King College Prep school band at the President's inauguration ceremony one week before.

I have come to know Hadiya's family—her mother Cleo and her father

Nate—and I have met many people who have been deeply affected by Hadiya's senseless murder.

After her death, Hadiya's friends started a campaign to urge people to wear orange on June 2, Hadiya's birthday, to honor victims of gun violence. Orange is the color that hunters wear in the woods so that nobody shoots them.

This campaign became a national phenomenon. June 2 has now become Gun Violence Awareness Day. Last year I was proud to join with students, faith leaders, community leaders, media figures, lawmakers, and many more across the Nation who wore orange to honor Hadiya and the 32,000 victims lost each year to gun violence.

I will be wearing orange again on June 2 this year, and I urge my colleagues to do the same.

We must never forget our solemn obligation to do all we can to keep the American people safe, and that includes keeping Americans safe from preventable gun violence.

Thousands of Americans are shot and killed each year in shootings that could have been prevented. There are steps we can take, consistent with our Constitution and with our traditions of hunting and sport shooting, to avoid these tragic deaths. We should not be afraid to take those steps.

This June 2, Hadiya Pendleton should be celebrating her 19th birthday. Instead, a nation will mourn her loss and the loss of so many others due to gun violence. We owe it to Hadiya and to the victims to do our best to spare others from this violence in the future.

REMEMBERING WALLY HENDERSON

Mr. DURBIN. Mr. President, 2 weeks ago I lost a dear friend and my hometown of Springfield, IL, lost one of its best. His name was Earl Wallace Henderson, but everyone knew him as Wally. He was an acclaimed architect who helped design Springfield's future while, at the same time, preserving its priceless past as the hometown of President Abraham Lincoln.

In the 1960s, Ferry & Henderson, the architectural firm he co-founded, took on one of its most important projects: expanding Illinois' historic old State capitol building to include underground parking, room for the State historical library, and other modern amenities.

The concept of architectural preservation was relatively at that time, and Wally became one of its pioneering leaders. Expanding the old State capitol involved taking the building apart piece by piece, cataloguing and moving more than 3,300 stones to the Illinois fairground, and then painstakingly rebuilding the structure over the new parking garage and library.

Wally's decades of innovative work in architectural preservation earned him admission in 2011 to the American Institute of Architects College of Fel-

lows, one of the highest honors in his field.

Interestingly, Wally became an architect almost by accident. What he wanted to be all through high school was an astronaut. More to the point, he wanted to be the first man to walk on the moon. This was back in the late 1940s, which gives you an idea of Wally's ability to imagine a future that few others could see.

Wally left Springfield in 1949 to study aeronautical engineering at the University of Illinois-Urbana Champaign. He was his parent's only child, and the first person in his extended family ever to go to college. When he came home for spring break during his freshman year, his parents were so proud of their son, the college student, that they invited a bunch of friends over.

One of the neighbors asked Wally, "What are you studying?"

Wally told them, "Aeronautical engineering."

Another neighbor asked, "So you want to build airplanes, do you?"

Wally replied, "No, I want to be the first man on the moon."

Years later in an interview, he recalled what followed.

"As those folks departed my mother said, 'Here, sit down, your dad and I want to talk to you for a moment.'"

Wally sat down between his dad and his mom, whom he respected greatly. His mother said, "You know, it's alright to say that to your dad and me about 'wanting to go to the moon.' But everybody else thinks you're crazy."

That was the end of Wally's dreams of being an astronaut. He went back to the university and asked a counselor what other school on campus would accept the credits he had earned.

Fortunately for Springfield, Wally's counselor suggested architectural engineering. That was the start of his long and distinguished career.

Wally graduated from the University of Illinois in 1954, moved to Indianapolis, and went to work for an engineering firm. Six months later, he was drafted into the Army and sent to Korea. This was several months after the ceasefire that ended the conflict. Wally was assigned to an engineering battalion.

One day, a young Korean boy about 11 years old was polishing Wally's boots to earn money for his family. The boy was telling Wally about his hometown, a little village. He said it was the best village in the world.

Wally said he started bragging about his own hometown, reached into his pocket and pulled out the only coin he had, a penny with Lincoln's image on it, and said, "I'm from his hometown."

The little boy had probably never traveled farther than 10 miles from his own village, but when he saw that penny, his face lit up. To this young boy, Wally said, "Abraham Lincoln was everything." Right there, 3,000 miles from home, Wally listened as this Korean child told him the story of the Great Emancipator.
